SUMMARY

Full-stack Software Developer at Bell Canada with production experience across the entire stack and a deep, shipping-focused portfolio spanning fintech, marketplaces, security tooling, and small-business web. I build end to end — React/TypeScript front ends, Node.js and .NET/C# back ends, SQL, Supabase/Postgres and MongoDB data layers, and integrations such as Stripe, Twilio, and Google Maps — and I ship with automated tests, CI/CD, and GitOps practices. A daily practitioner of AI-assisted and agentic development (Claude, Cursor, GitHub Copilot), certified in GitOps Fundamentals (Argo) and Microsoft Azure Fundamentals. Known for accessible, well-documented code, honest communication, and taking ambiguous problems from idea to production.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), C#, Python, SQL, HTML5, CSS3
Front End	React 18, Redux, Vite, Next.js, Svelte, Tailwind CSS, shadcn/ui, Radix UI, Recharts, responsive & accessible UI (WCAG), reusable component libraries & design tokens
Back End	Node.js, Express, .NET / ASP.NET Core, REST API design, authentication & authorization, Supabase Edge Functions, webhooks
Data	PostgreSQL (Supabase), Microsoft SQL Server, MongoDB, MySQL, schema/data modeling, caching & query optimization
Integrations	Stripe payments, Twilio SMS, Google Maps API (geolocation, geocoding, GPS), Wealthsimple data pipelines, Postman
Cloud & DevOps	Docker, AWS, Azure, CI/CD pipelines, GitOps with Argo CD, Git/GitHub/GitLab, code review workflows
Testing & Quality	Jest, React Testing Library, Vitest, unit/integration testing, TDD, debugging & profiling
AI-Assisted Dev	Claude & Claude Code, GitHub Copilot, Cursor — daily use for implementation, test generation, debugging, and review acceleration

PROFESSIONAL EXPERIENCE

Software Developer — Bell Canada (Permanent Full-time · Mississauga, ON · Hybrid) May 2024 – Present

- Design, develop, and maintain production web applications with React, TypeScript, and Node.js serving internal teams and customer-facing platforms across the organization.
- Build reusable front-end components consumed across multiple internal web platforms, integrating them with REST APIs and documenting patterns so distributed teams can adopt them independently.
- Develop and support .NET / C# backend services with SQL Server data layers — API design, performance tuning, and production debugging from logs and traces.
- Write automated test suites (Jest, React Testing Library) and participate in rigorous code reviews, keeping releases dependable as shared components evolve.
- Ship through CI/CD pipelines with Docker to cloud infrastructure, applying GitOps practices, and use AI-assisted tooling daily to accelerate delivery without compromising quality or security.

Full-Stack Developer — FinanceCanada (financial-literacy platform, full product team) 2023 – Present

- Build FinanceCanada, a financial-literacy platform developed with a full team — owning features end to end from requirements through implementation, testing, deployment, and iteration with real users.
- Develop the React/TypeScript front end and Node.js REST API backend; maintain a shared component library and design tokens so a distributed team ships consistent UI to production.
- Collaborate across time zones through Git-based workflows with pull-request review and clear documentation.

Junior Programmer (Co-op) — Ministry of the Solicitor General, Ontario Public Service (Hamilton, ON · On-site) Jan 2023 – Aug 2023

- Developed and maintained internal applications and data-handling workflows (JSON processing and related tooling) in a government environment with strict quality and communication standards.
- Worked directly with stakeholders to gather requirements, deliver iterations, and document solutions for handover.

PROJECTS

Wealth Folios — Investment Portfolio Tracker

React 18 · TypeScript · Vite · Tailwind CSS · shadcn/ui · Radix UI · Recharts · Supabase (Postgres + Edge Functions) · Vitest

- Built a portfolio analysis tool that imports Wealthsimple activity CSV exports, parses trade and account activity, and matches buy/sell transactions into FIFO lots.
- Implemented open/sold position tracking, portfolio allocation, and profit/loss views with Recharts, plus historical exit-date simulations powered by a Supabase Edge Function serving historical prices.
- Covered the parsing and lot-matching logic with a Vitest unit-test suite.

QuickLyft — Moving-Services Marketplace (MVP)

React · Vite · Tailwind CSS · Node.js · Express · Supabase (Postgres, Auth, Storage, Realtime) · Stripe · Twilio · Google Maps API

- Designed and built a three-sided marketplace — Customer app, Contractor app, and Admin dashboard — sharing one booking → dispatch → completion → payment flow.
- Integrated Stripe payments, Twilio SMS notifications, and Google Maps for routing/location; structured delivery in phased milestones (A–G) tracked through GitHub issues.
- Unit-tested the pricing engine and business rules on the backend.

Anti-Phishing Browser Plugin

Svelte · JavaScript · Node.js (client/server architecture)

- Built a browser extension with a companion server to help users detect and avoid phishing websites — a security-conscious project pairing client-side detection UX with server-side checks.

SSD Employers — Employer Management System

C# · .NET

- Developed an employer management system in C#/.NET covering CRUD workflows and structured data management.

MapApp — Web Mapping Application

JavaScript · HTML/CSS · Geolocation, Geocoding & GPS APIs

- Built a web mapping app integrating browser geolocation, address geocoding, and GPS tracking.

Additional Projects

- **Fit-Path & Streak-Fit-Track** (TypeScript) — fitness-tracking web apps. **DoLittle** (Node.js/EJS) — self-built URL shortener. **MovieTracker** — movie-tracking web app. **The Waitlist App** (TypeScript) — waitlist-management implementation.
- **Freelance small-business sites** (TypeScript/React) — Apex Roofing, Greenscape Dream, and Precision Pixel Shop marketing sites.
- **Shopify Engineering Intern Challenge** (Python) — completed the Braille translation coding challenge.

CERTIFICATIONS

- **GitOps Fundamentals (GitOps with Argo)** — Octopus Deploy / Codefresh, 2026
- **Microsoft Certified: Azure Fundamentals (AZ-900)** — Microsoft
- **The Complete Full-Stack Web Development Bootcamp** — Dr. Angela Yu (Udemy)

EDUCATION

Advanced Diploma (3-year), Computer Systems Technology — Software Development

Mohawk College — Hamilton, ON
